1)write a Blog of Difference Between Document and window object

Answer:

Document object	Window Object
All tags ,elements with attributes of HTML are part of the Document object.	Global objects,Functions,Variables in Javascript are part of the window object.
It loaded inside a window	It loaded inside a Browser
It represent HTML documents or web pages that loaded in browser	It represents window browser or frame that display content of the web page
We can access a document from window	We can access a window from window only
The document is part of BOM(Browser object model) and DOM(Document object model)	The Window is part of BOM not DOM
It is an object window property.	It is an object of Browser.
